Additional step necessary - see below.			

*** For Yahoo Users:**

If you receive an error similar to *"The SMTP server requires a secure connection or the client was not authenticated. The server response was: 5.5.1 Authentication Required."* you will need to log into your email account and take a couple of steps for additional security.

[Generate a Third-party App Password](#)

If you do not have this option when logged into your email account, your provider may not allow it. You will then need to connect a different email address or use the use Desktop client option instead.
